

Tyler Stahl

Forward Deployed Engineer

Glen Rock, NJ

APPLICATION FIT

Deloitte Forward Deployed Engineer, Frontier GenAI (req 350555)

Strong fit for rapid GenAI prototyping on Google platforms, agentic workflows with human-in-the-loop controls, and shipping production-quality software with stakeholders. Lighter on formal consulting engagement leadership and multi-cloud enterprise data-engineering depth.

Strongest alignment

- **Production GenAI and agentic workflow delivery on Google platforms** — Experience → Independent R&D; Selected Projects → InSummery.AI, Cognitive Bridge
- **Human-in-the-loop controls, evaluation, and responsible AI patterns** — Experience → Independent R&D (HITL gates, eval harness, PII masking); Selected Projects → OpenClaw Multi-Agent Ecosystem
- **Translating ambiguous business needs into working software with senior stakeholders** — Experience → Charity Navigator (CMO partnership, cross-functional delivery); Volant Web Design (client delivery end-to-end)

Gaps / indirect fit

- **Formal engagement / workstream leadership at enterprise consulting scale** — Source data documents team contribution and solo client delivery rather than named engagement-lead roles; Charity Navigator cross-functional and CMO partnership work shows stakeholder-facing delivery without claiming undocumented consulting titles.
- **Hybrid onshore/offshore pod operations** — NAMI and Charity Navigator were remote/hybrid engineering roles; no explicit offshore pod leadership is documented in source data (confidence limited).
- **Multi-cloud (AWS/Azure) and enterprise data-engineering stack depth** — Google Cloud, Firebase, and Vertex AI are well evidenced; high-scale web and GraphQL platform work at Charity Navigator partially maps to cloud platform fluency without claiming undocumented AWS, Azure, Spark, or Airflow experience.
