

Tyler Stahl

Full-Stack Engineer

Glen Rock, NJ · [Portfolio](#) · [GitHub](#) · [LinkedIn](#)

SUMMARY

Full-stack software engineer with experience shipping React/TypeScript and Laravel applications at nonprofit scale, plus hands-on applied AI systems work.

EXPERIENCE

Applied AI Developer — Independent R&D

2026-02 – Present · NJ

Building applied AI infrastructure spanning multi-agent orchestration, hybrid LLM inference, structured extraction pipelines, and human-in-the-loop controls. Working in multiple LLMs, harnesses, deployment stacks, and eval platforms.

- Shipped a Gemini-backed CrewAI orchestration layer with structured Supervisor decisions and sequential specialist task execution.
- Built a mention-driven Slack service with immediate ack, background crew execution, threaded replies, and HTTP health/agent roster APIs.
- Integrated Google Docs and Drive APIs with personal OAuth and service-account paths plus safe mock mode for demo environments.
- Deployed a Next.js MCP endpoint on Vercel that loads markdown patterns at request time for cross-client agent tooling.
- Wired Clerk OAuth and optional MCP_SECRET_KEY Bearer acceptance into a Next.js MCP route with well-known authorization-server and protected-resource endpoints left public.
- Shipped an agentic scheduling product spanning ADK workflow, structured extraction, and a parent-facing schedule matrix.
- Connected structured schedule state to Google Calendar OAuth sync and a parent-facing dashboard.
- Shipped a full-stack agentic product with Firebase backend, React frontend, and Google Calendar integration.
- Shipped a distributed multi-agent research system with Python workers, SQLite persistence, and production-minded state management.
- Implemented Python data pipelines with durable SQLite state for agent-driven research and reporting.
- Shipped a secured serverless Cognitive Bridge backend with Firebase Auth, Firestore state, and type-safe Gemini JSON responses driving UI and DB updates.

Technologies: Python, Google ADK 2.0, OpenClaw, CrewAI, Google Gemini, Gemma, FastAPI, Slack Bolt, Firebase, SQLite, Cursor Agent SDK, Weights & Biases Weave

Front-End Developer — NAMI

2024-12 – 2026-01 · Remote

Built and maintained NAMI's Laravel-based core business application with a focus on reusable UI components, accessibility, and Cypress E2E testing.

- Implemented a shared component library to enforce architecture standards and accelerate UI delivery.
- Developed automated E2E testing pipelines with Cypress to reduce manual QA cycles and improve release confidence.

Technologies: Laravel, Livewire, Alpine, Cypress, JavaScript

Software Engineer — Charity Navigator

2023-08 – 2024-09 · NJ

Contributed to a high-traffic React/TypeScript data portal, GraphQL API transitions, and cross-functional delivery with product and data teams.

- Engineered portal features in React/TypeScript for a high-traffic nonprofit data platform.
- Supported GraphQL migration of legacy data flows for a high-traffic nonprofit platform.

Technologies: React, TypeScript, GraphQL, JavaScript

Front-End Web Developer — Charity Navigator

2019-03 – 2023-08 · NJ

Led frontend design and development for platform rebranding, technology migration, and high-traffic public web experiences.

- Contributed to end-to-end delivery of a large nonprofit platform rebuild and rebrand.
- Supported cross-functional marketing initiatives from large rebrand projects to rapid tactical website deployments.
- Shipped full-stack initiatives linked to a \$5M grant and 43% processing-efficiency improvement.

Technologies: JavaScript, HTML5, CSS, React

Founder & Web Developer — Volant Web Design

2024-09 – Present · NJ

Resumed sole-proprietorship web design and development work for B2B clients, covering requirements through production deployment and SEO.

- Consulted with B2B clients to design, build, and deploy PHP/JS web solutions end to end.

Technologies: PHP, JavaScript, HTML5, CSS

SELECTED PROJECTS

Glen Rock AI Guild — Independent R&D

2026

A community AI club needed a mention-driven Slack assistant that could answer simple questions immediately while spinning up the right domain specialists for deeper technical, data, insurance, and writing work—without requiring a public webhook URL.

Built a CrewAI multi-agent backend with a Supervisor that classifies Slack mentions into simple vs detailed intents, dynamically selects Engineer / Data Analyst / Insurance SME / Web Designer / Writer agents, runs on Google Gemini with model failover, and exposes FastAPI health/roster endpoints plus Google Docs/Drive sync with mock fallback.

Technologies: CrewAI, Google Gemini, FastAPI, Slack Bolt, Socket Mode, Python, Pydantic, Google Docs API, Google Drive API, AgentOps

Development Knowledge Vault — Independent R&D

2026

AI coding agents on new projects rediscover the same deploy, auth, eval, and security practices instead of reusing distilled patterns from prior agent and product repos.

Built a Vercel-hosted MCP server that exposes markdown engineering patterns as tools (``list_patterns``, ``get_pattern``), with dual auth on one URL—Clerk OAuth for cloud clients and an optional shared-secret Bearer for local/curl—so Cursor, Gemini Spark, and other MCP clients can pull operational preferences and prior solutions at request time.

Technologies: Next.js, Vercel, MCP, Clerk, OAuth, TypeScript, Markdown

InSummery.AI — Independent R&D

2026

Family scheduling information lives in messy emails, texts, and PDFs; calendar apps assume tidy manual entry and do not detect multi-child childcare gaps or real-time disruptions with a human still in control.

Built a Google ADK 2.0 multi-agent concierge that masks PII, triages and extracts schedule data, pauses below 80% confidence for HITL clarification, maintains a multi-child schedule matrix with absolute/relative gap analysis, and syncs disruptions to Google Calendar—shipped as a Kaggle + Google 5-Day AI Agents Intensive Consult-track capstone.

Technologies: Google ADK 2.0, Python, Pydantic, Google Gemini, Vertex AI, Gemma, Ollama, Firebase, Firebase Cloud Functions, Cloud Firestore, Firebase Authentication, React, Vite, Google Calendar API, OpenTelemetry

OpenClaw Multi-Agent Market Intelligence Ecosystem — Independent R&D

2025-2026

Long-running agentic market-research tasks lose state and context without durable memory and governance when synthesizing fragmented commodity and market data.

Built an autonomous research framework on OpenClaw with specialized agents (data pull, profitability analysis, dashboard UI, orchestrator), SQLite persistence, Python ETL workers, and HITL approval gates—applied to real-world and World of Warcraft commodity markets.

Technologies: OpenClaw, Python, SQLite, Google Gemini, Gemma

Cognitive Bridge: AI Personality Alignment — Independent R&D

2025-2026

Human-AI collaboration can suffer when agent personality is poorly matched to the user, and prototypes need a path from AI Studio into secured production backends.

Built an OCEAN-based personality alignment prototype in Google AI Studio, then productionized it on Firebase Cloud Functions with Firestore memory, Firebase Auth, Vertex AI, and Pydantic-validated structured Gemini outputs.

Technologies: Google AI Studio, Google Gemini, Firebase, Firebase Cloud Functions, Cloud Firestore, Firebase Authentication, Vertex AI, Pydantic, Python

NAMI Design Component Library — NAMI

2024-2026

Front-end delivery needed stronger architecture standards and reusable UI patterns across the core business application.

Built and implemented a centralized design component library to enforce standards and streamline UI deployment.

Technologies: Laravel, Livewire, JavaScript

Charity Navigator Data Review Portal — Charity Navigator

2023-2024

Internal and client data-review workflows needed a scalable React/TypeScript portal with modern API integration.

Engineered portal features and helped transition legacy data flows into GraphQL endpoints while collaborating with product and data teams.

Technologies: React, TypeScript, GraphQL

Charity Navigator Platform Rebuild — Charity Navigator

2019-2023

Modernize and rebrand a high-traffic nonprofit platform serving millions of annual users.

Led frontend execution of the 20th-anniversary rebrand and platform rebuild in collaboration with external design agencies and internal stakeholders.

Technologies: JavaScript, HTML5, CSS, React

SKILLS

Applied AI: PII masking, Firebase, Model Context Protocol

Front-End: JavaScript, React, TypeScript, Next.js

Back-End: FastAPI, Slack Bolt, Google Docs / Drive APIs, Laravel, GraphQL, SQLite, Clerk OAuth, PHP

Testing: Cypress

Collaboration: Stakeholder collaboration, Deep listening

EDUCATION

Udacity — Front-End Web Developer Nanodegree

Full scholarship from Google through the "Grow with Google" program.

Seattle University — MA, Counseling

Dartmouth College — BA, Anthropology
