

Tyler Stahl

Agentic Software Engineer

Glen Rock, NJ · [Portfolio](#) · [GitHub](#) · [LinkedIn](#)

SUMMARY

Software engineer who ships production web platforms and uses AI-assisted delivery—Cursor Agent SDK orchestration, structured task breakdown, automated testing, and human review gates—to turn requirements into reliable build, test, and release outcomes.

EXPERIENCE

Applied AI Developer — Independent R&D

2026-02 – Present · NJ

Building applied AI infrastructure spanning multi-agent orchestration, hybrid LLM inference, structured extraction pipelines, and human-in-the-loop controls. Working in multiple LLMs, harnesses, deployment stacks, and eval platforms.

- Shipped a Gemini-backed CrewAI orchestration layer with structured Supervisor decisions and sequential specialist task execution.
- Built a mention-driven Slack service with immediate ack, background crew execution, threaded replies, and HTTP health/agent roster APIs.
- Shipped an agentic scheduling product spanning ADK workflow, structured extraction, and a parent-facing schedule matrix.
- Built a review-and-resume HITL checkpoint so uncertain agent output is validated before it updates production schedule state.
- Added automated quality gates and regression baselines so agent workflow changes are validated before release.
- Shipped a full-stack agentic product with Firebase backend, React frontend, and Google Calendar integration.
- Shipped a distributed multi-agent research system with Python workers, SQLite persistence, and production-minded state management.
- Implemented Python data pipelines with durable SQLite state for agent-driven research and reporting.
- Added delivery controls around agent actions—HITL approvals, gateway whitelisting, and secrets management—before commits land.

- Used the Cursor Agent SDK to orchestrate evaluation and testing subagents with mandatory human review before high-stakes handoffs.
- Shipped a secured serverless Cognitive Bridge backend with Firebase Auth, Firestore state, and type-safe Gemini JSON responses driving UI and DB updates.
- Developed Stack Overlord for OpenAI Build Week with Codex/GPT-5.6-assisted delivery and GPT-5.6-powered project intelligence.
- Shipped scripts/refresh.js for State of AI Briefing to orchestrate Anthropic, market-data, and store-rank fetches in Actions, commit results, and surface refresh failures without blanking live panels.

Technologies: Python, Google ADK 2.0, OpenClaw, CrewAI, Google Gemini, Gemma, FastAPI, Slack Bolt, Firebase, SQLite, Cursor Agent SDK, Weights & Biases Weave, Codex, GPT-5.6

Front-End Developer — NAMI

2024-12 – 2026-01 · Remote

Built and maintained NAMI's Laravel-based core business application with a focus on reusable UI components, accessibility, and Cypress E2E testing.

- Implemented a shared Tailwind component library plus Storybook for org-wide reuse, architecture standards, and faster UI delivery.
- Developed automated E2E testing pipelines with Cypress to reduce manual QA cycles and improve release confidence.
- Supported CCIE-TM registration release work by improving multi-date registration handling, documenting testing steps, and assisting staging release readiness.

Technologies: Laravel, Livewire, Alpine, Cypress, JavaScript, Tailwind CSS, Storybook, Figma, Adobe XD

Software Engineer — Charity Navigator

2023-08 – 2024-09 · NJ

Contributed to a high-traffic React/TypeScript data portal, GraphQL API transitions, and cross-functional delivery with product and data teams.

- Engineered portal features in React/TypeScript for a high-traffic nonprofit data platform.
- Supported GraphQL migration of legacy data flows for a high-traffic nonprofit platform.
- Connected MySQL data to the front-end through Sequelize for Charity Navigator portal features.
- Used Docker in Charity Navigator CI/CD deploy scripts for application delivery.
- Collaborated across product and data teams to translate requirements into portal and API improvements.

Technologies: React, TypeScript, GraphQL, JavaScript, Sequelize, MySQL, Docker

Front-End Web Developer — Charity Navigator

2019-03 – 2023-08 · NJ

Led frontend design and development for platform rebranding, technology migration, and high-traffic public web experiences.

- Contributed to end-to-end delivery of a large nonprofit platform rebuild and rebrand.
- Supported cross-functional marketing initiatives from large rebrand projects to rapid tactical website deployments.

Technologies: JavaScript, HTML5, CSS, React

Founder & Web Developer — Volant Web Design

2017-04 – 2019-03 · NJ

Founded and ran a web design business offering development, SEO, and analytics for clients across multiple industries.

- Owned end-to-end client delivery from requirements gathering through deployment and SEO reporting.

Technologies: PHP, JavaScript, HTML5, CSS

SELECTED PROJECTS

AgentOS: Chief of Staff Agent — Independent R&D

2025-2026

Complex long-running workflows need reliable orchestration with mandatory human checkpoints.

Built a multi-agent orchestrator with the Cursor Agent SDK, modular subagents, and HITL handoffs for evaluation and testing stages.

Technologies: Cursor Agent SDK, Python

Glen Rock AI Guild — Independent R&D

2026

A community AI club needed a mention-driven Slack assistant that could answer simple questions immediately while spinning up the right domain specialists for deeper technical, data, insurance, and writing work—without requiring a public webhook URL.

Built a CrewAI multi-agent backend with a Supervisor that classifies Slack mentions into simple vs detailed intents, dynamically selects Engineer / Data Analyst / Insurance SME / Web Designer / Writer agents, runs on Google Gemini with model failover, and exposes FastAPI health/roster endpoints plus Google Docs/Drive sync with mock fallback.

Technologies: CrewAI, Google Gemini, FastAPI, Slack Bolt, Socket Mode, Python, Pydantic, Google Docs API, Google Drive API, AgentOps

InSummery.AI — Independent R&D

2026

Family scheduling information lives in messy emails, texts, and PDFs; calendar apps assume tidy manual entry and do not detect multi-child childcare gaps or real-time disruptions with a human still in control.

Built a Google ADK 2.0 multi-agent concierge that masks PII, triages and extracts schedule data, pauses below 80% confidence for HITL clarification, maintains a multi-child schedule matrix with absolute/relative gap analysis, and syncs disruptions to Google Calendar—shipped as a Kaggle + Google 5-Day AI Agents Intensive Consult-track capstone.

Technologies: Google ADK 2.0, Python, Pydantic, Google Gemini, Vertex AI, Gemma, Ollama, Firebase, Firebase Cloud Functions, Cloud Firestore, Firebase Authentication, React, Vite, Google Calendar API, OpenTelemetry

OpenClaw Multi-Agent Market Intelligence Ecosystem — Independent R&D

2025-2026

Long-running agentic market-research tasks lose state and context without durable memory and governance when synthesizing fragmented commodity and market data.

Built an autonomous research framework on OpenClaw with specialized agents (data pull, profitability analysis, dashboard UI, orchestrator), SQLite persistence, Python ETL workers, and HITL approval gates—applied to real-world and World of Warcraft commodity markets.

Technologies: OpenClaw, Python, SQLite, Google Gemini, Gemma

Cognitive Bridge: AI Personality Alignment — Independent R&D

2025-2026

Human-AI collaboration can suffer when agent personality is poorly matched to the user, and prototypes need a path from AI Studio into secured production backends.

Built an OCEAN-based personality alignment prototype in Google AI Studio, then productionized it on Firebase Cloud Functions with Firestore memory, Firebase Auth, Vertex AI, and Pydantic-validated structured

Gemini outputs.

Technologies: Google AI Studio, Google Gemini, Firebase, Firebase Cloud Functions, Cloud Firestore, Firebase Authentication, Vertex AI, Pydantic, Python

Stack Overlord — Independent R&D

2026

A merge can succeed in GitHub while its post-merge deployment fails silently (credentials, quotas, environment config), leaving production stale with no clear notification signal—built for OpenAI Build Week 2026's Developer Tools track under tight hackathon constraints, primarily via Codex/GPT-5.6.

Built a Next.js/TypeScript command center that ingests signed GitHub Actions webhooks into a durable Postgres/Drizzle ledger (GitHub stays the source of truth for pass/fail), diagnoses failures with the OpenAI Responses API (GPT-5.6) using evidence citations, confidence levels, and verification steps, alerts Slack, and ships a deterministic credential-free demo mode so judges can exercise the whole flow.

Technologies: Codex, GPT-5.6, Next.js, React, TypeScript, Tailwind CSS, shadcn/ui, Postgres, Drizzle ORM, OpenAI Responses API, Vercel, Playwright, Vitest, GitHub Actions, Slack Bolt

State of AI Briefing — Independent R&D

2026

AI industry metrics (valuations, public markets, model benchmarks, usage, capital, energy) are scattered and change often; a one-off report goes stale quickly, and refreshing from the browser on a public URL would mean shipping an API key or exposing an endpoint strangers could abuse.

Built a periodically refreshed industry briefing as a Vite/React static site on Vercel, with GitHub Actions running scripts/refresh.js to update panel data via the Anthropic API (filtered web search for valuations; Haiku-backed panels with configured web search), direct fetches for US app-store ranks and Yahoo Finance closes, and commits to public/data/*.json plus trend.csv so visitors only read published files from the CDN.

Technologies: Vite, React, JavaScript, GitHub Actions, Vercel, Anthropic API

NAMI 720 Event Platform — NAMI

2024-2026

Maintain and improve event-management workflows for nonprofit users and staff.

Contributed front-end implementation and Cypress testing practices in a Laravel/Livewire application.

Technologies: Laravel, Livewire, Alpine, Cypress

Charity Navigator Data Review Portal — Charity Navigator

2023-2024

Internal and client data-review workflows needed a scalable React/TypeScript portal with modern API integration.

Engineered portal features, queried MySQL via Sequelize for front-end data, helped transition legacy flows into GraphQL, and worked with Docker-based CI/CD deploy scripts.

Technologies: React, TypeScript, GraphQL, Sequelize, MySQL, Docker

SKILLS

Applied AI: Multi-agent orchestration, CrewAI, Antigravity, Codex / GPT, Anthropic API, Human-in-the-loop controls, Agent evaluation, Vertex AI, Cursor Agent SDK, Model Context Protocol, Weights & Biases Weave

Front-End: JavaScript, React, TypeScript, Next.js, Performance optimization

Back-End: Firebase, Firestore, Sequelize, Postgres / Drizzle ORM, Python, FastAPI, Slack Bolt, Laravel, GraphQL, SQLite, Clerk OAuth

Testing: Cypress, Playwright

DevOps: Docker, CI/CD, GitHub Actions

Collaboration: Release support, Stakeholder collaboration, Deep listening, Agile / Scrum, Consensus-building, Cross-department collaboration

EDUCATION

Udacity — Front-End Web Developer Nanodegree

Full scholarship from Google through the "Grow with Google" program.

Seattle University — MA, Counseling

Dartmouth College — BA, Anthropology

Google Skills — Google AI Summit

Jun 2026 (pending)

Kaggle — 5-Day AI Agents: Intensive Vibe Coding Course with Google

Jun 2026 (pending)

DeepLearning.AI — Agentic AI

May 2026

Breach Secure Now — Artificial Intelligence (AI) Skills in Action

Oct 2025

Breach Secure Now — Artificial Intelligence (AI) Fundamentals

Oct 2025

Breach Secure Now — 2025 Cybersecurity Training

Jan 2025

IBM — Enterprise Design Thinking Practitioner
