

Tyler Stahl

Agentic Software Engineer

Glen Rock, NJ · [Portfolio](#) · [GitHub](#) · [LinkedIn](#)

SUMMARY

Software engineer who ships production web platforms and uses AI-assisted delivery—Cursor Agent SDK orchestration, structured task breakdown, automated testing, and human review gates—to turn requirements into reliable build, test, and release outcomes.

EXPERIENCE

Applied AI Developer — Independent R&D

2026-02 – Present · NJ

Builds applied AI infrastructure spanning multi-agent orchestration, hybrid LLM inference, structured extraction pipelines, and human-in-the-loop controls—including the InSummery.AI family schedule concierge capstone.

- Shipped an agentic scheduling product spanning ADK workflow, structured extraction, and a parent-facing schedule matrix.
- Built a review-and-resume HITL checkpoint so uncertain agent output is validated before it updates production schedule state.
- Added automated quality gates and regression baselines so agent workflow changes are validated before release.
- Shipped a full-stack agentic product with Firebase backend, React frontend, and Google Calendar integration.
- Shipped a distributed multi-agent research system with Python workers, SQLite persistence, and production-minded state management.
- Implemented Python data pipelines with durable SQLite state for agent-driven research and reporting.
- Added delivery controls around agent actions—HITL approvals, gateway whitelisting, and secrets management—before commits land.
- Used the Cursor Agent SDK to orchestrate evaluation and testing subagents with mandatory human review before high-stakes handoffs.
- Shipped a secured serverless Cognitive Bridge backend with Firebase Auth, Firestore state, and type-safe Gemini JSON responses driving UI and DB updates.

Technologies: Python, Google ADK 2.0, OpenClaw, Google Gemini, Gemma, Firebase, SQLite, Cursor Agent SDK

Front-End Developer — NAMI

2024-12 – 2026-01 · Remote

Built and maintained NAMI's Laravel-based core business application with a focus on reusable UI components, accessibility, and Cypress E2E testing.

- Implemented a shared component library to enforce architecture standards and accelerate UI delivery.
- Developed automated E2E testing pipelines with Cypress to reduce manual QA cycles and improve release confidence.
- Supported CCIE-TM registration release work by improving multi-date registration handling, documenting testing steps, and assisting staging release readiness.

Technologies: Laravel, Livewire, Alpine, Cypress, JavaScript

Software Engineer — Charity Navigator

2023-08 – 2024-09 · NJ

Contributed to a high-traffic React/TypeScript data portal, GraphQL API transitions, and cross-functional delivery with product and data teams.

- Engineered portal features in React/TypeScript for a high-traffic nonprofit data platform.
- Supported GraphQL migration of legacy data flows for a high-traffic nonprofit platform.
- Collaborated across product and data teams to translate requirements into portal and API improvements.

Technologies: React, TypeScript, GraphQL, JavaScript

Front-End Web Developer — Charity Navigator

2019-03 – 2023-08 · NJ

Led frontend design and development for platform rebranding, technology migration, and high-traffic public web experiences.

- Contributed to end-to-end delivery of a large nonprofit platform rebuild and rebrand.
- Supported cross-functional marketing initiatives from large rebrand projects to rapid tactical website deployments.

Technologies: JavaScript, HTML5, CSS, React

SELECTED PROJECTS

AgentOS: Chief of Staff Agent — Independent R&D

2025-2026

Complex long-running workflows need reliable orchestration with mandatory human checkpoints.

Built a multi-agent orchestrator with the Cursor Agent SDK, modular subagents, and HITL handoffs for evaluation and testing stages.

Technologies: Cursor Agent SDK, Python

InSummery.AI — Independent R&D

2026

Family scheduling information lives in messy emails, texts, and PDFs; calendar apps assume tidy manual entry and do not detect multi-child childcare gaps or real-time disruptions with a human still in control.

Built a Google ADK 2.0 multi-agent concierge that masks PII, triages and extracts schedule data, pauses below 80% confidence for HITL clarification, maintains a multi-child schedule matrix with absolute/relative gap analysis, and syncs disruptions to Google Calendar—shipped as a Kaggle + Google 5-Day AI Agents Intensive Consult-track capstone.

Technologies: Google ADK 2.0, Python, Pydantic, Google Gemini, Vertex AI, Gemma, Ollama, Firebase, Firebase Cloud Functions, Cloud Firestore, Firebase Authentication, React, Vite, Google Calendar API, OpenTelemetry

OpenClaw Multi-Agent Market Intelligence Ecosystem — Independent R&D

2025-2026

Long-running agentic market-research tasks lose state and context without durable memory and governance when synthesizing fragmented commodity and market data.

Built an autonomous research framework on OpenClaw with specialized agents (data pull, profitability analysis, dashboard UI, orchestrator), SQLite persistence, Python ETL workers, and HITL approval gates—applied to real-world and World of Warcraft commodity markets.

Technologies: OpenClaw, Python, SQLite, Google Gemini, Gemma

Cognitive Bridge: AI Personality Alignment — Independent R&D

2025-2026

Human-AI collaboration can suffer when agent personality is poorly matched to the user, and prototypes need a path from AI Studio into secured production backends.

Built an OCEAN-based personality alignment prototype in Google AI Studio, then productionized it on Firebase Cloud Functions with Firestore memory, Firebase Auth, Vertex AI, and Pydantic-validated structured Gemini outputs.

Technologies: Google AI Studio, Google Gemini, Firebase, Firebase Cloud Functions, Cloud Firestore, Firebase Authentication, Vertex AI, Pydantic, Python

NAMI 720 Event Platform — NAMI

2024-2026

Maintain and improve event-management workflows for nonprofit users and staff.

Contributed front-end implementation and Cypress testing practices in a Laravel/Livewire application.

Technologies: Laravel, Livewire, Alpine, Cypress

Charity Navigator Data Review Portal — Charity Navigator

2023-2024

Internal and client data-review workflows needed a scalable React/TypeScript portal with modern API integration.

Engineered portal features and helped transition legacy data flows into GraphQL endpoints while collaborating with product and data teams.

Technologies: React, TypeScript, GraphQL

SKILLS

Applied AI: Multi-agent orchestration, Human-in-the-loop controls, Agent evaluation, Firebase, Vertex AI, Cursor Agent SDK

Front-End: JavaScript, React, TypeScript

Back-End: Python, Laravel, GraphQL, SQLite

Testing: Cypress

Collaboration: Release support, Stakeholder collaboration
